Text twist go fun word games

The Windows Store is packed with challenging and fun puns that can be both addictive and educational at the same time. These offers range from hidden word puzzles to work creation games. Most are available for Windows 10 Mobile, because on the go, windows 10 PC when you're stuck behind your desktop. Options range from hidden word puzzles to text creation games, with some Xbox Live titles where you can boost your Xbox Achievements collection. There are several high-quality puns for Windows 10. After searching store shelves high and low, here are our best puns for Windows 10. Updated January 27, 2017 We have made some changes to this article based on new releases, reader inputs and personnel debate. There are some new titles in the mix, as well as those that we continue to see as the best from the Windows Store. Let's take a look at how things have changed! Wordament is a Boggle-style word game played online against other players in a continuous real-time word tournament. This Xbox game has been around for a while and is still an addictive time waste. Available for both Windows 10 PC and Mobile, the game design is pretty simple. You get a 4x4 grid of letters that are used to create as many words as possible before the two-minute timer expires. You connect adjacent letters vertically, horizontally, or diagonally to create words with three or more letters in length. Scoring is based on the scoring value assigned to each letter. If you draw a blank and need some help finding words, there's an update button that mixes the letters around. When the game is over, your score is ranked against hundreds (if not thousands) of other Wordament players. Scoring summary highlights the selected words, the words that are not found, and a summary of score statistics from the field. Wordament has some display options and 17 Xbox achievements to earn. It's a free game available for Windows 10 PC and Mobile, with progress synced between devices through your Microsoft account. Games last only a few minutes, but can be dangerously addictive - it's a good choice when you only have a few minutes to go, but strong enough to hold up to longer gaming sessions. Download Wordament from Windows Store AlphaJax Readers suggested a variety of Scrabble-style games, and while Words by Post and WordFeud were well represented, AlphaJax had the strongest showing. AlphaJax is available for Windows 10 PC and Mobile as a free Xbox Live game, offering you an online Scrabble gaming experience. AlphaJax offers online games against friends or random opponents, as well as a pass-and-play mode. Gameplay follows along the traditional Scrabble game with you starting with seven letter tiles that must be used to build words on the game board. Each letter is assigned a point value and strategic tiles offer point multipliers. Gaming is trip-based with limited supply of letter tiles that are the ones you put into play. Words can be built on another, and finally, when all the tiles are used or no more words are possible, the player with the most points wins the game. Alphajax allows you to juggle up to 30 games at once and tracks all your game stats. There is support for notifications to alert you when it's your turn to play, and a messaging feature is available to chat it up with your opponents. The pace of the game depends on your opponent, without the game timer in place to regulate the pace. The free game is available for Windows 10 PC and Mobile, unfortunately not as a universal app. It would be nice to see that the change with the mobile version needs an update to set it at the same level as the PC version. Nevertheless, all in all, Alphajax is a solid rendition of the classic board game and a challenging way to pass the time with. This word game is one of the best renderings of the classic game of hangman available, offering an eye-catching design and challenging gameplay. Even the 2011 trailer is still one of the sharpest game promos out there. And this is for Hangman. Trines Hangman is an online version of the classic game where you compete against other players to see who can collect the highest cumulative score. There is also a local two-player mode (pass-and-play style) available to allow you to test your spelling skills between friends. The electronic component requires free registration that allows your progress to follow you between devices. Trines Hangman features crisp graphics, smooth animations, Wikipedia integration, and bonus ringtones that can be downloaded to your Windows 10 mobile phone. It's a well-rounded, sharp pun. Trines Hangman is a free, ad-supported game for Windows 10 Mobile. You can opt out of the ads with Trines Hangman Pro (\$2.49) from the Windows Store. Download Trines Hangman from Windows Store Snap Attack Snap Attack Is another challenging pun from the developers behind Wordament. There is also an Xbox Live game available for Windows 10 PC and Mobile. The fast-paced game challenges you to create as many words as possible in two and a half minute rounds. The playing field is preset with a variety of letters, and you build your words using a collection of seven letters. Words or Snap can be built by each other as long as the word string is anchored by one of the preset letters. After you've exhausted all your letters, press the update button and start building more words. Think of it as a speeding round of Scrabble. Scoring is based on the scores assigned to letters with point multipliers scattered around the game board. You compete against other players online to see who can collect the most points before the game timer strikes zero. Like Wordament. Snap Attack tracks your game statistics and your achievements against other players. Being an Xbox Xbox progress is synchronized between Windows 10 devices. Snap Attack is a free, ad-supported game that's great for when you only have a few minutes to save or when you need some help losing track of time. Download Snap Attack from Windows Store Word Search Everyone needs a good word search game, and there are many good options in the Windows Store. The best, however, is the aptly titled Word Search from developer Steve Nessen. Word Search stood out a little from the package with the two levels of difficulty and the huge customizable word collection. The game plays out like any other hidden word puzzle: you have a 10x12 grid of jumbled letters that have 15 words hidden in plain sight. A scroll list of these hidden words runs at the top of the screen, and when you discover them, they are removed from the list. The goal is to identify all the words as quickly as possible. Words are identified by tapping and dragging your finger along the letters to build the word. Words can be hidden vertically, diagonally or horizontally, and can be spelled forward or backward. Word Search settings allow you to select the word type, and it includes 15 categories and five languages. Categories include topics such as movies, cartoon characters, sports, cities, and more. Two levels of difficulty are also available to add to the puzzle's challenge. The only nit I could find with Word Search is that the ad support banner was easily tapped when I identify words at the bottom of the screen. This is not a deal breaker, but rather something to get used to. You can also opt out of ad support with an in-app purchase of \$0.99. Word Search is available for Windows 10 PC and Mobile, and in general it's an entertaining pun to lose track of time with. Download Word Search from the Windows Store If you've tried any of these Windows 10 puns, you can tell us what you think of them in the comments. We've just scratched the surface of all the amazing word games in the Windows Store. There are many more like Spellspire, Wordfix and 7 Little Words. And if you have a favorite word game that wasn't mentioned, feel free to share your recommendation. We can earn a commission for purchases using our links. get more information. Microsoft Word provides a feature that allows you to search for text in a document. You can also use advanced settings to make your search more specific, such as matching or ignoring punctuation. Here's how to use it. Find text in a Word document To search for text in Word, you need to access the Navigation pane. To do this, on the Home tab, in the Editing group, select Find. An alternative method to access this pane is by using the Keyboard shortcut Ctrl + F on Windows or Command + F on Mac. RELATED: How to search for text inside of a file using the Windows Search With Navigation pane open, type the text you want to find. The number of instances that the text is displayed throughout is displayed. You can navigate through the search results by selecting the up and down arrows below the search box or by clicking directly on the result snippet in the navigation pane. Set advanced search features The caveat with the basic search function is that it does not take into account many things, such as the letters in the text. This is a problem if you search a document that contains a lot of content, such as a book or thesis. To fine-tune these details, go to the Editing group on the Home tab, select the arrow next to Find and select Advanced Find from the drop-down list. The Find and Replace window appears. Select More. In the Search options group, select the check boxes for the options you want to enable. Now, the next time you search for text in Word, the search will work with the selected advanced options.
